

# DRY VAN TRAILER

Dry Van Trailers are the most common of all trailers due to their versatility. Because the trailer is fully enclosed, many types of shipments can be handled safely using a Dry Van as the product is protected from the elements. Most often, Dry Vans carry skidded freight and are loaded from a dock using a forklift or pallet jack, however, loading from the ground is also usually an option as well. In addition, floor loaded cargo is often transported on Dry Vans.
